

Question 1

Write a Php script to create a database, create table and delete the database.

```
<html>
<head>
    <title>Program 1</title>
</head>
<body>
    <form action="" method="post">
        <input type="submit" value="Create Database" name="createDB">
        <input type="submit" value="Create Table" name="createTB">
        <input type="submit" value="Delete Database" name="del">
    </form> <br><br>

    <?php

    $servername = "localhost"; //if your port no. is not 3306, then you need to manually type the port number here..
    $username = "root";
    $pwd = "";

    $con = new mysqli($servername, $username, $pwd);

    if ($con) {
        echo "Connection Established<br>";
    } else {
        die("Connection failed: " . $con -> connect_error);
    }

    if (isset($_POST["createDB"])) {
        $sql = "create database mydbaa";

        if ($con -> query($sql) === TRUE) {
            echo "Database created successfully";
        } else {
            die("Error creating database: " . $con -> error);
        }
    }

    if (isset($_POST["createTB"])) {
        $con = new mysqli($servername, $username, $pwd, "mydbaa");

        $sql = "create table details(Name varchar(30) not null,
            Age varchar(30) not null)";

        if ($con -> query($sql) === TRUE) {
            echo "Table \"details\" created successfully";
        } else {
            echo "Error creating table: " . $con -> error;
        }
    }

    if (isset($_POST["del"])) {
        $sql = "drop database mydbaa";
        $res = $con -> query($sql);
    }
}
```

```

        if ($res) {
            // echo var_dump($res);
            echo "<br>Database is deleted";
        } else {
            die("Some exception occurred");
        }
    }

    ?>
</body>
</html>

```

Output :

Connection Established
 Database created successfully

Connection Established
 Table "details" created successfully

Connection Established
 Database is deleted
