

# Question 3

---

Write a program to concatenate two strings using command line argument.

```
class Concat {
    public static void main(String args[]) {
        int i, j, n;
        n = args[0].length() + args[1].length();
        char c[] = new char[n];
        for (i = 0; i < args[0].length(); i++) {
            c[i] = args[0].charAt(i);
        }

        j = i;

        for (i = 0; i < args[1].length(); i++) {
            c[j] = args[1].charAt(i);
            j++;
        }

        System.out.print("The Concatinated String is: ");
        System.out.println(c);
    }
}
```

**OR**

```
class ConcatTwo {
    public static void main(String args[]) {
        String s3;
        s3 = args[0] + args[1];

        System.out.println("The concatenated Strings = " + s3);
    }
}
```

---

Output:

```
D:\clg_notes\Sem_4\Java\Lab\Part A>java ConcatTwo Hello World
The concatenated Strings = HelloWorld
```
